

USABILITY TESTS & EVALUATION

Reese Oxner | Dec. 2019

Purpose | To gain insight into how users interact with my design and remedy any pain points.

Scope; overview | I had two classmates test my website. They found navigation problems that I remedied. The scope of this test was four pages and for 5-8 minutes of navigation.

Usability issues	Severity	user_1	user_2
Did not know how to access hover for title	3	Yes	no
Could not find admin panel	3	Yes	Yes
Mobile responsiveness error (fixed)	2	Yes	Yes
Error when adding to database	5	yes	yes

Other findings | There are technical bugs (CSS and SQL) that led to design errors as well as design flaws that led to users being confused. They had a hard time finding other pages and using the portfolio pages without a clear hierarchy or UX. I have since addressed these issues.

Scenario | I First scenario was as site owner, second was as a customer. Each switched roles as well and provided feedback.

Future participants | To choose participants, I would have chosen a variety of ages and technological proficiencies to get a wider range of views. I would also use eye-tracking and heatmaps.

Action items | - Add confirmation messages and clearer buttons. ✓

- Fix review system sizing. ✓
- Add color to confirmation messages. ✓
- Fix mobile footer. ✓
